Graph shows Max/Avg/Min for your temperature fluctuation.

Geographically view sensor values and alerts in hundreds of facilities across the globe.

View and make updates on any device.

## PRODUCTS

### » Monitor » Scheduler » Archiver » Event Manager

Our secure cloud solution gives you access to view historical data and change settings on your Maverick Appliances from anywhere using https in your internet browser just like online banking. All products utilize the Tree View feature that allows you to organize your Mavericks in a hierarchical layout that you define as shown above on the laptop. There are 4 models currently available that support up to 5 Mavericks: GTM105 (Monitor), GTS105 (Scheduler), GTA105 (Archiver), and GTE105 (Event Manager). Other models are also available to support up to 10 and 25 Mavericks: GTM110, GTS110, GTA110, GTE110, GTM125, GTS125, GTA125, and GTE125.

The **Monitor** toaster gives you read-only access to your Maverick settings and sensor data. This product allows you to view the Maverick dashboard and current settings from anywhere you have internet access. Alerts can be setup to have emails sent from the Maverick or from the cloud. Sending alerts from the cloud will be required when your Internet provider blocks port 25.

The **Scheduler** toaster includes everything in the Monitor toaster and allows you to change settings from anywhere there is internet access. You'll be able to define heating and cooling times for your morning, daytime, evening, and overnight periods just like you do directly on the Maverick Appliances. Using these defined times, you can define the temperature and fan schedules for each day of the week. Beyond the regular schedule, you can define special days in advance when the building is occupied or unoccupied. You'll have access to change the same settings that you can change in the Maverick but from anywhere you have an internet connection. You can apply a set of changes across one, many, or all Mavericks at the same time.

The **Archiver** toaster adds archiving along with the Monitor and/or Scheduler toaster(s) you have purchased. It archives 1 year of historical data that gives you the ability to graph Max/Avg/Min for sensor values and create simple reports using Maverick sensor values and formulas. Reporting can feed financial systems or provide a dashboard view of all Mavericks at a location or across the globe. This product requires you to also purchase the Monitor or Scheduler toaster for the same set of Mavericks.

The **Event Manager** toaster adds event management along with the Monitor and/or Scheduler toaster(s) you have purchased. This toaster allows you to manage events using the Events and Map View features.

With Events, you can setup notification alerts based on any value shown on the Maverick dashboard. The alert notification can also be escalated to a supervisor when the alert has not been corrected after a defined period of time. Events are so flexible that you can setup a single alert for all Mavericks in your company to notify you when the temperature is below the setpoint and the heat has been on for a defined amount of time.

Map View gives you a geographical view of your locations and Maverick alerts as shown above on the monitor. Map View allows you to quickly visualize Max/Avg/Min/Current sensor values and alerts in hundreds, if not thousands, of facilities across the globe. This product requires you to also purchase the Monitor or Scheduler toaster for the same set of Mavericks.
